# **Recurrent Neural Networks**

TOTAL POINTS 10

1. Suppose your training examples are sentences (sequences of words). Which of the following refers to the  $j^{th}$  word in the (1 point  $i^{th}$  training example?

 $\bigcirc \ x^{(i) < j >}$ 

 $\bigcirc \ x^{< i > (j)}$ 

 $\bigcirc x^{(j) < i >}$ 

 $\bigcirc \ x^{< j > (i)}$ 

2. Consider this RNN:

1 point a<1> x<2>

This specific type of architecture is appropriate when:

$$\bigcirc$$
  $T_x = T_y$ 

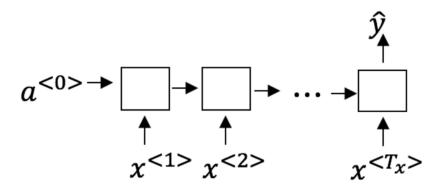

$$\bigcap T_x < T_y$$

$$\bigcap T_x > T_y$$

$$\bigcap T_x = 1$$

 ${\it 3.} \quad {\it To which of these tasks would you apply a many-to-one RNN architecture? (Check all that apply).}$ 

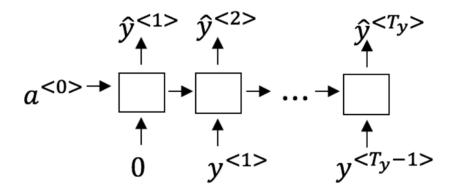

1 point

- Speech recognition (input an audio clip and output a transcript)
- Sentiment classification (input a piece of text and output a 0/1 to denote positive or negative sentiment)
- Image classification (input an image and output a label)

4. You are training this RNN language model.

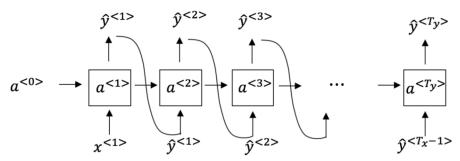

1 point

At the  $t^{th}$  time step, what is the RNN doing? Choose the best answer.

- $\bigcirc \ \, \operatorname{Estimating} P(y^{<1>},y^{<2>},\dots,y^{< t-1>})$
- igcup Estimating  $P(y^{< t>})$
- Estimating  $P(y^{< t>} \mid y^{< 1>}, y^{< 2>}, \ldots, y^{< t-1>})$
- $\bigcirc \ \, \text{Estimating} \, P(y^{< t>} \mid y^{< 1>}, y^{< 2>}, \ldots, y^{< t>})$
- 5. You have finished training a language model RNN and are using it to sample random sentences, as follows:

1 point

What are you doing at each time step t?

- (i) Use the probabilities output by the RNN to pick the highest probability word for that time-step as  $\hat{y}^{< t>}$ . (ii) Then pass the ground-truth word from the training set to the next time-step.
- (i) Use the probabilities output by the RNN to randomly sample a chosen word for that time-step as  $\hat{y}^{< t>}$ . (ii) Then pass the ground-truth word from the training set to the next time-step.
- (i) Use the probabilities output by the RNN to pick the highest probability word for that time-step as  $\hat{y}^{< t>}$ . (ii) Then pass this selected word to the next time-step.
- (i) Use the probabilities output by the RNN to randomly sample a chosen word for that time-step as  $\hat{y}^{< t>}$ . (ii) Then pass this selected word to the next time-step.
- 6. You are training an RNN, and find that your weights and activations are all taking on the value of NaN ("Not a Number"). 1 point Which of these is the most likely cause of this problem?
  - Vanishing gradient problem.
  - Exploding gradient problem.
  - ReLU activation function g(.) used to compute g(z), where z is too large.
  - Sigmoid activation function g(.) used to compute g(z), where z is too large.

- O 1
- 100
- 300
- 10000
- 8. Here're the update equations for the GRU.

### 1 point

## **GRU**

$$\begin{split} \tilde{c}^{< t>} &= \tanh(W_c[\Gamma_r * c^{< t-1>}, x^{< t>}] + b_c) \\ \Gamma_u &= \sigma(W_u[c^{< t-1>}, x^{< t>}] + b_u) \\ \Gamma_r &= \sigma(W_r[c^{< t-1>}, x^{< t>}] + b_r) \end{split}$$

$$c^{} = \Gamma_u * \tilde{c}^{} + (1 - \Gamma_u) * c^{}$$

$$a^{< t>} = c^{< t>}$$

Alice proposes to simplify the GRU by always removing the  $\Gamma_u$ . i.e., setting  $\Gamma_u$  = 1. Betty proposes to simplify the GRU by removing the  $\Gamma_r$ . i. e., setting  $\Gamma_r$  = 1 always. Which of these models is more likely to work without vanishing gradient problems even when trained on very long input sequences?

- $\bigcirc$  Alice's model (removing  $\Gamma_u$ ), because if  $\Gamma_r \approx 0$  for a timestep, the gradient can propagate back through that timestep without much decay.
- $\bigcirc$  Alice's model (removing  $\Gamma_u$ ), because if  $\Gamma_r \approx 1$  for a timestep, the gradient can propagate back through that timestep without much decay.
- igoplus Betty's model (removing  $\Gamma_r$ ), because if  $\Gamma_u pprox 0$  for a timestep, the gradient can propagate back through that timestep without much decay.
- $\bigcirc$  Betty's model (removing  $\Gamma_r$ ), because if  $\Gamma_u pprox 1$  for a timestep, the gradient can propagate back through that timestep without much decay.
- 9. Here are the equations for the GRU and the LSTM:

1 point

LSTM

### GRU

# $\tilde{c}^{< t>} = \tanh(W_c[\Gamma_r * c^{< t-1>}, x^{< t>}] + b_c)$ $\tilde{c}^{< t>} = \tanh(W_c[a^{< t-1>}, x^{< t>}] + b_c)$ $\Gamma_u = \sigma(W_u[c^{< t-1>}, x^{< t>}] + b_u)$ $\Gamma_u = \sigma(W_u[a^{< t-1>}, x^{< t>}] + b_u)$ $\Gamma_r = \sigma(W_r[c^{< t-1>}, x^{< t>}] + b_r)$ $\Gamma_f = \sigma(W_f[a^{< t-1>}, x^{< t>}] + b_f)$ $\Gamma_f = \sigma(W_o[a^{< t-1>}, x^{< t>}] + b_f)$ $\Gamma_o = \sigma(W_o[a^{< t-1>}, x^{< t>}] + b_o)$ $\Gamma_o = \sigma(W_o[a^{< t-1>}, x^{< t>}] + b_o)$ $\Gamma_o = \sigma(W_o[a^{< t-1>}, x^{< t>}] + b_o)$ $\Gamma_o = \Gamma_u * \tilde{c}^{< t>} + \Gamma_f * c^{< t-1>}$ $\Gamma_o = \Gamma_u * \tilde{c}^{< t>} + \Gamma_f * c^{< t-1>}$ $\Gamma_o = \Gamma_o * c^{< t>} + \Gamma_f * c^{< t-1>}$ $\Gamma_o = \Gamma_o * c^{< t>} + \Gamma_f * c^{< t-1>}$

From these, we can see that the Update Gate and Forget Gate in the LSTM play a role similar to \_\_\_\_\_ and \_\_\_\_ in the GRU. What should go in the the blanks?

- $igorup \Gamma_u$  and  $1-\Gamma_u$
- $\bigcap$   $\Gamma_u$  and  $\Gamma_r$
- $\bigcirc \ 1 \Gamma_u$  and  $\Gamma_u$
- $\bigcap$   $\Gamma_r$  and  $\Gamma_u$

for the past 365 days on the weather, which you represent as a sequence as $x^{<1>}, \dots, x^{<365>}$ . You've als on your dog's mood, which you represent as $y^{<1>}, \dots, y^{<365>}$ . You'd like to build a model to map from $x$			
you use a Unidirectional RNN or Bidirectional RNN for this problem?			
<ul> <li>Bidirectional RNN, because this allows the prediction of mood on day t to take into account more information.</li> <li>Bidirectional RNN, because this allows backpropagation to compute more accurate gradients.</li> <li>Unidirectional RNN, because the value of y<sup><t></t></sup> depends only on x<sup>&lt;1&gt;</sup>,, x<sup><t></t></sup>, but not on x<sup><t+1></t+1></sup>,, x<sup>&lt;365&gt;</sup></li> </ul>			
		O Unidirectional RNN, because the value of $y^{< t>}$ depends only on $x^{< t>}$ , and not other days' weather.
