# The basics of ConvNets

**TOTAL POINTS 10**

---

1. What do you think applying this filter to a grayscale image will do?  `1 point`

$$\begin{bmatrix} 0 & 1 & -1 & 0 \\ 1 & 3 & -3 & -1 \\ 1 & 3 & -3 & -1 \\ 0 & 1 & -1 & 0 \end{bmatrix}$$

- ○ Detect vertical edges
- ○ Detect 45 degree edges
- ○ Detect horizontal edges
- ○ Detect image contrast

2. Suppose your input is a 300 by 300 color (RGB) image, and you are not using a convolutional network. If the first hidden layer has 100 neurons, each one fully connected to the input, how many parameters does this hidden layer have (including the bias parameters)?  `1 point`

- ○ 9,000,001
- ○ 9,000,100
- ○ 27,000,001
- ○ 27,000,100

3. Suppose your input is a 300 by 300 color (RGB) image, and you use a convolutional layer with 100 filters that are each 5x5. How many parameters does this hidden layer have (including the bias parameters)?  `1 point`

- ○ 2501
- ○ 2600
- ○ 7500
- ○ 7600

4. You have an input volume that is 63x63x16, and convolve it with 32 filters that are each 7x7, using a stride of 2 and no padding. What is the output volume?  `1 point`

- ○ 29x29x16
- ○ 16x16x32
- ○ 16x16x16
- ○ 29x29x32

5. You have an input volume that is 15x15x8, and pad it using "pad=2." What is the dimension of the resulting volume (after padding)?  `1 point`

- ○ 19x19x8
- ○ 17x17x8
- ○ 17x17x10
- ○ 19x19x12

6. You have an input volume that is 63x63x16, and convolve it with 32 filters that are each 7x7, and stride of 1. You want to use a "same" convolution. What is the padding?  `1 point`

- ○ 1
- ○ 2
- ○ 3
- ○ 7

7. **You have an input volume that is 32x32x16, and apply max pooling with a stride of 2 and a filter size of 2. What is the output volume?**  <span>1 point</span>

○ 16x16x8

○ 15x15x16

○ 32x32x8

○ 16x16x16

8. **Because pooling layers do not have parameters, they do not affect the backpropagation (derivatives) calculation.**  <span>1 point</span>

○ True

○ False

9. **In lecture we talked about "parameter sharing" as a benefit of using convolutional networks. Which of the following statements about parameter sharing in ConvNets are true? (Check all that apply.)**  <span>1 point</span>

☐ It allows parameters learned for one task to be shared even for a different task (transfer learning).

☐ It reduces the total number of parameters, thus reducing overfitting.

☐ It allows a feature detector to be used in multiple locations throughout the whole input image/input volume.

☐ It allows gradient descent to set many of the parameters to zero, thus making the connections sparse.

10. **In lecture we talked about "sparsity of connections" as a benefit of using convolutional layers. What does this mean?**  <span>1 point</span>

○ Each layer in a convolutional network is connected only to two other layers

○ Regularization causes gradient descent to set many of the parameters to zero.

○ Each activation in the next layer depends on only a small number of activations from the previous layer.

○ Each filter is connected to every channel in the previous layer.
